

Dear Parent

We are happy to inform that the Saudi Space Agency (SSA), in cooperation with Misk Foundation and Ilmi Science Discovery & Innovation Center, has launched Madak competition for students in the Arab world with the aim of increasing Arab contributions to the field of space science. The competition targets students between 6 and 18 years of age through three categories: arts, agriculture, and engineering.

The winning submissions are expected to be sent to the International Space Station in the fourth quarter of the current year, 2024, which opens new horizons for students to see their creativity reach space. The competition will have an impact on students by enriching their contributions in the fields of space and its sciences, enhancing research and innovation, motivating generations to participate in science fields, and supporting gifted and creative individuals.

SSA called on all students across the Arab world to register through Madak web page on the Saudi Space Agency's website, indicating that registrations last until April 30, 2024. The website includes details of the three categories, the age groups for each category, and the mechanism for submitting the request to participate.

Students may join the competition via the link [ssa.gov.sa](https://ssa.gov.sa) to become future scientists who inspire the world with their great creativity, innovations, and discoveries.

Best wishes

Vice Principal
